ARNAV ASHISH GURAO

8928510537 — arnavagurao@gmail.com — LinkedIn — GitHub

SUMMARY

Computer Engineering student with a strong interest in software development, cloud computing, and emerging technologies. Building practical experience through academic coursework, hands-on projects, and hackathons, with a strong foundation in programming, AWS cloud services, databases, and mobile development. Seeking internship opportunities to apply technical skills to real-world problems and further develop software engineering expertise.

EDUCATION

Fr. Conceicao Rodrigues College of Engineering **2024 – 2028**
B.Tech in Computer Engineering — CGPA: 9.02/10 *Mumbai, India*
Pursuing Minor in Business Management

TECHNICAL SKILLS

Languages: C, Java, Python
Web Development: HTML, CSS, JavaScript, React.js, FastAPI
Mobile Development: React Native
Cloud: AWS , Google Cloud (GCP)
Database: PostgreSQL, SQLite
Tools: Git, GitHub, Vite

PROJECTS

DataGuard — Full-Stack Data Validation & Quality Reporting Platform
React.js, Vite, Python, FastAPI, Pandas, PostgreSQL, SQLAlchemy, AWS (EC2, RDS, S3, SQS, SNS, IAM, CloudWatch)

- Developed a **full-stack CSV validation platform** with customizable rules to detect missing values, duplicates, schema inconsistencies, and invalid records.
- Implemented **asynchronous processing with a Python worker**, enabling persistent job tracking, quality reports, and downloadable validated/rejected datasets.
- Designed an **AWS cloud architecture** for scalable processing, secure storage, notifications, and monitoring.

Cardexa — Smart Software that finds unused subscriptions to stop budget leaks
React Native, Expo, SQLite

- Led development of a **React Native mobile application** for tracking credit cards and subscriptions, designed for Indian users.
- Implemented features for organizing financial accounts and subscription information within a centralized mobile interface.
- Collaborated with the team to develop and refine the application under a time-constrained hackathon environment.

RoadSOS — AI-Powered Emergency Response App
React Native, Flask, Node.js, Python

- Spearheaded development of a cross-platform emergency-response application for locating and routing users to nearby hospitals and police services.
- Developed backend components using **Flask and Node.js** to process geolocation-based requests and connect the mobile interface with emergency-service data.
- Integrated an **NLP-based conversational triage assistant** to guide users through emergency situations and provide relevant response instructions.

ACHIEVEMENTS

- **Third Runner-Up — National-Level Hackathon**, Shree L. R. Tiwari College of Engineering.
- **Consistent Academic Performance:** Maintained strong academic performance throughout school education.

HACKATHONS & PARTICIPATION

- Participated in the **IIT Madras Road Safety Hackathon 2026**, contributing to the development of the RoadSOS emergency-response application.
- Participated in the **Summer Hackathon Nationwide Competition 2026**, developing the Cardexa mobile application as part of **Team Cache Me If You Can**.
- Participated in **Prakalp 4.0 – Sankraman**, an innovation hackathon organized by **Fr. Conceicao Rodrigues College of Engineering (FRCRCE), Bandra**.
- Participated in a **National-Level Hackathon** conducted at **Universal AI University**, gaining experience in collaborative problem-solving and rapid application development.

ADDITIONAL INFORMATION

Certifications:
AWS Academy Graduate – Cloud Architecting (AWS Academy)
Google Cloud Engineering Certificate (Google Cloud)

Languages: English, Hindi, Marathi
Interests: Public speaking, trekking, and outdoor sports
